Adolescent Literacy, Reading Comprehension & the FCAT

Dr. Joseph Torgesen
Florida State University and
Florida Center for Reading Research

CLAS Conference, Naples, May, 2004
Some definitions of reading comprehension to set the stage:

“Acquiring meaning from written text”
Gambrell, Block, and Pressley, 2002

“the process of extracting and constructing meaning through interaction and involvement with written language”
Sweet and Snow, 2002

“thinking guided by print”
Perfetti, 1985
What we know about the factors that affect reading comprehension

Proficient comprehension of text is influenced by:

- Accurate and fluent word reading skills
- Oral language skills (vocabulary, linguistic comprehension)
- Extent of conceptual and factual knowledge
- Knowledge and skill in use of cognitive strategies to improve comprehension or repair it when it breaks down.
- Reasoning and inferential skills
- Motivation to understand and interest in task and materials
Does the relative contribution of each of these factors to performance on measures of reading comprehension change with age?
The Florida Center for Reading Research recently conducted a study of the FCAT to answer several important questions:

Among the most important questions were these:

What are the reading, language, and cognitive abilities that are most important in explaining individual differences in performance on the FCAT at 3rd, 7th, and 10th grades?

What kinds of skills and knowledge are particularly low in students who struggle on the FCAT?
The FCAT has some important characteristics.

It was specifically created to place high demands on vocabulary and reasoning/inferential skills.

“FCAT demands an in-depth understanding and application of information that is not typical of most standardized tests.” (Lessons Learned, 2002)

Design specifications call for “application of skills in cognitively challenging situations.”

Proportion of questions requiring “higher order” thinking skills increases from 30% in grade three to 70% in grade 10.
The FCAT has some important characteristics.

The FCAT may also place special demands on reading fluency, as opposed to “labored accuracy.”

Passage length at different levels:
- 3rd grade – 325 words
- 7th grade – 816 words
- 10th grade – 1008 words
How the study was conducted:

Gave 2 hour battery of language, reading, nonverbal reasoning, and memory tests to approximately 200 children in each grade at 3 locations in the state

**Language** – Wisc Vocab and Similarities
Listening comprehension with FCAT passage

**Reading** – Oral reading fluency, TOWRE, Gray Oral Reading Test

**NV Reasoning** – Wisc Matrix Reasoning, Block Design

**Working Memory** – Listening span, Reading Span
3rd Grade

Important Conclusions from the Study

1. The FCAT performs as it was designed to do: as grade level increases, performance depends more and more on verbal knowledge and higher order thinking skills.

2. The FCAT is a very demanding test of reading comprehension. The average national percentile score of students at grade level on the FCAT (level 3) is 69th in 3rd grade, 68th in 7th grade, and 62nd in 10th grade.

3. In third grade, the primary problem of students that achieve scores at level one is in the area of reading fluency and accuracy. These students have verbal skills and knowledge only slightly below average, but their reading fluency scores are at the 6th percentile.
Conclusions about the task of Florida’s teacher’s

1. The most direct way to reduce the number of students at level 1 in third grade is to more powerfully teach and nurture the growth of accurate and fluent reading skills in all children.

2. At the same time, because of the heavy vocabulary, knowledge, and thinking demands of the FCAT beginning in third grade, we must build strong foundations in these areas during early reading instruction.
Conclusions about the task of Florida’s teacher’s (cont.)

3. In late elementary, middle, and high school, we must assure that all children acquire essential content knowledge to keep pace with the accelerating verbal knowledge demands of the FCAT.

4. We must also engage all students in deeply thoughtful interactions with print to that critical, inferential, and analytic skills continue to develop

5. We must also develop sustained interventions to improve the accuracy, fluency, and confidence of significant numbers who have fallen seriously behind in their ability to read text fluently.
Another way to say it:

Preparing children to meet grade level standards in reading comprehension by the end of third grade, and to help students grow in the skills and knowledge required for grade level comprehension after third grade, is a job for all teachers, not just “reading teachers.”

It’s at least as much about building content knowledge, vocabulary, and thinking skills as it is about helping children learn to read accurately and fluently.
